DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Fujidai et al. US Patent No. 6,384,693.

Fujidai et al. discloses in Figure 6 an Colpitts oscillator comprising: an oscillating active element (TR1); a capacitor (C1) connected between a feedback-signal input terminal (a3) of the oscillating active element (TR1) and a ground (ground symbol); a first bias resistor (R5) connected between the feedback-signal input terminal (a3) and a power input terminal (a4); and a second bias resistor (R2) connected between the feedback-signal input terminal (a3) and a control-voltage input terminal (a5); wherein the first bias resistor and the second bias resistor have values such that when the control-voltage input terminal is grounded, the bias voltage at the feedback-signal input terminal is above the ground potential and below a threshold for continuous² oscillation of the oscillating active element, and when the control-voltage input terminal is open, the bias voltage at the feedback-signal input terminal is above the threshold (the circuit of Fujidai et al. is fully capable of performing the functional limitation as recited above).

Allowable Subject Matter

Claims 3-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the best prior art of record, Fujidai et al., taken alone or in combination of other references, does not teach or fairly suggest the laser diode as set forth in the claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Schell et al. discloses in Figure 104B a Colpitts oscillator with a LD but no "second bias resistor".

Park discloses a Colpitts VCO.
